

POWER VENTILATOR

For Manhole Rescue™

Engineered for Performance

HURCO Technologies provides the right tools to make your manhole rescue operations fast and safe.

 **HURCO**
TECHNOLOGIES, INC.®

HURCO's Power Ventilator for manhole rescue has been specifically designed to provide emergency personnel, safe and unobstructed access to the rescue manhole.

PERFORMANCE COUNTS

- Safe Rescue Environment**
 Power Ventilator creates a safe rescue environment by pulling dangerous gasses away from the rescue manhole while blocking gasses from migrating into the manhole from adjacent pipes.
- Unobstructed Access**
 The Power Ventilator is located away from the rescue manhole, leaving an unobstructed opening to perform rescue operations.
- Better Communications**
 Because the Power Ventilator is located away from the rescue manhole, engine and fan noise is eliminated improving communication between rescue workers.
- Quick Setup**
 Seconds count when doing a manhole rescue and seconds are all it takes to setup the Power Ventilator.
- Ventilate Faster**
 The Power Ventilator's unique fan design removes dangerous gasses from the rescue manhole in seconds. Traditional methods of dilution ventilation can take several minutes.
