

No Other Gauge *MEASURES UP*

When new PVC, polyethylene, ductile iron and fiberglass sewer pipes are installed, deflection testing is always part of the process.

Our Stationary Steel Gauges, Multi-Size Steel Gauges and our new aluminum Whistle Gauges™ are:

- Manufactured with exact precision*.
- Clearly marked and serialized with part number, dimension and ASTM information.
- The industry's only full line of gauges manufactured with the correct number of skids to accurately gauge deflection.
- Field certifiable without proving rings.
- Sized to fit through 24" manhole openings.
- Powder coated for a durable finish.

And finally, our uniquely designed Multi-Sized gauge means fewer parts and is self-storing. Frame assembly is zinc plated for trouble free service.

*Detailed specifications available at our web site - www.hurcotech.com

Stationary Deflection Test Gauges

Multi-Size Deflection Test Gauges

Proving Rings

"I've been there. I know what it's like to suddenly find out I need a piece of equipment to finish the job and have to wait for it. If a customer calls us with a special order, it gets priority in our shop. We make every effort to deliver those orders on time and where they need it.

We're tooled-up and have all the equipment and spare parts. We've researched our methods and keep detailed specifications on our customers so we can quickly respond and make recommendations on their needs."
