

New & Improved!

Valve & Vac[®]

Valve Maintenance & Repair System

All-In-One... Valve & Hydrant Maintenance System

Valve & Vac[®] is a powerful vacuum that features the Spin Doctor[®] valve and hydrant exerciser. This unique combination will save municipalities thousands of dollars in delays caused by bringing in outside help when valve boxes are damaged or full of debris.

It can take hours and cost hundreds of dollars when you pull your expensive sewer cleaning trucks off another job just to clean a valve box. With a powerful vacuum and high pressure water jet, the Valve & Vac[®] will eliminate this delay. You can easily emulsify soil and quickly vacuum it away in minutes.

It can take days to get utility locations and a crew assembled to repair a damaged valve box. With the Valve & Vac[®], you can do the same job in approximately one hour and there is no need to worry about buried utilities. Save thousands of dollars over traditional valve box excavation and repair!

The Valve & Vac[®] is easily towable with a small pickup or utility vehicle. It can be maneuvered into areas that would be impossible with larger vacuum trucks and the Valve & Vac[®] is a fraction of the cost of those giant trucks.

The Spin Doctor[®] feature of the Valve & Vac[®] system, makes accessing and exercising a valve or hydrant a snap! The Spin Doctor[®] features the industries greatest range of motion. Multiple valves in close proximity can be exercised

without repositioning the Valve & Vac[®]. Vertical and horizontal articulation means the Spin Doctor[®] can reach valves and hydrants that would be impossible for competitive models.

The Valve Star[®] option available for the Spin Doctor[®] will give you complete data collection for your valve or hydrant exercising activities. With patented, integrated GPS, you can pinpoint your valve or hydrants while you exercise them. You will also be collecting data on other valve and hydrant exercising activities such as torque applied to the valve, revolution and cycle count, and much more.

As an option, only the Valve & Vac[®] system allows for fire flow testing of your fire hydrants. Utilizing Hydro Flow's UL and/or FM listed Hose Monster, you can be assured of an accurate fire flow test as you exercise your fire hydrants. Only Hurco offers this unique feature.

Valve & Vac[®], truly an All-In-One valve and hydrant maintenance system.

This product is covered by one or more of the following patents; 7,334,606, 7,376,529 or other patents pending.

Valve & Vac[®]

Valve Maintenance & Repair System

Specifications:

- 31 HP V-Twin B&S gas engine or a 36 HP Cat diesel engine
- 450 CFM lobe type blower @ 14" Hp.
- Giant brand high pressure water pump – 4.7 GPM @ 3400 PSI
- Y-Strainer water filter element
- 90 gallon plastic fresh water tank w/ 1 1/2" drain valve
- 6 gallon anti-freeze tank with 1" PVC 3-way valve
- Low water automatic engine shutdown
- Giant brand pressure sensitive regulating unloader valve
- Large blower silencer muffler for noise abatement - 80 db.
- 200 gallon spoils tank with 6" full spoils tank check valve and a 4" inlet gate valve
- Hydraulic full opening rear door cammed for using a single handle, moving 4 deadbolts into lock position and a 3" drain gate valve
- 5 micron washable bag filtration, wet or dry vacuum capability with 3" PVC drain valve
- 10 gallon fuel cell
- 1 – 6000# Torflex rubber torsion axle with electric brakes
- 2 – ST235/80 R16 Load Range E tires
- Rear curbside auxiliary hydraulics – 10 GPM @ 2000 PSI with 10 gallon oil reservoir
- Lockable hose reel with 50' high pressure hose and flexible spray wand
- 1 – 2" vacuum relief valve
- 1 – 2 1/2" stainless steel vacuum guage
- 7000# trailer jack
- 12 volt battery
- Curbside controls
- Pintel or 2 5/16" ball hitch
- 3" X 25' vac hose with ball and socket fittings
- 16" Lawn Sweep on 3" steel vac tube
- Standard valve box cleanout tool
- Strobe and dual halogen worklight kit
- Skid mount fits in 8' truck bed
- Trailer mounted:
 - 79" width
 - 15' length
 - 94" height (top of strobe)

Cost effective means for most excavation and clean up duties.

Exercise valves and hydrants quickly.
